Program

Invitation

The field of Interventional Pulmonology has been advancing in a dizzying pace, making it increasingly hard to follow all developments in the field, especially in matters of specialized training.

This educational lectures on Endobronchial ultrasound, Transbronchial Needle Aspiration, Thermoablation, Laser Applications, Stenting, Cryobiopsy and Cryotherapy, Endoscopic Lung Volume Reduction and Bronchial Thermoplasty is specially designed to cover all advancements in the field of Interventional Pulmonology.

The program offers the unique opportunity to the Greek and International audience to attend seminars prepared and presented by both Greek and foreign scientists with extended clinical and research experience in their respected fields. The learning experience is further enhanced by hands on seminars simulating each technique presented in the lectures, also offering face-to-face classroom interaction with the staff members.

The seminars are available for trained pulmonologist or residents and fellows regardless of former experience on the field and are aiming to offer a deeper understanding and provide insight in the latest developments of the Interventional Pulmonology indications and handling procedures.

We invite you to participate, actively and effectively, by attending the lectures and the hands on seminars so that knowledge instills as a valuable experience.
